

STACKING DEVICE FOR
THERMOPLASTIC CONTAINERS
AND/OR LIDS

Abstract of the Disclosure

5 A stacking device includes a main member, at least one support member extending
from the main member and having a first interference fit with a container, and at least one
wall member extending from the support member and having a second interference fit
with the container. The first interference fit is capable of resisting relative movement of
the stacking device and the container in a first direction and the second interference fit is
10 capable of resisting relative movement of the stacking device and container in a second
direction transverse to the first direction.
